

The Cozy User Guide

What's a Cozy?

The Cozy is a thermostatic radiator enclosure– or simply put, a smart radiator cover. Instead of having overheated apartments from radiators that residents can't control, residents can now use the Cozy to regulate the amount of heat that enters their apartments. Just set a target temperature in each room, and let the Cozy handle the rest!

There are two main features to the Cozy:

1. The Touch Screen displays the (a.) **room temperature** and the controls for the (b.) **target temperature**.

- The **max setting** will keep the Cozy fan on continuously
- Conversely, the **min setting** will keep the fan turned off

2. The Temperature and Light Sensors measure the temperature and ambient light in the room. The sensors allow the Cozy to calibrate its settings to most efficiently help you reach your desired room temperature. For the most accurate readings, please do not place furniture within 3 feet of the Cozy.

Resident FAQs

> What are the benefits to me?

The Cozy offers several benefits, including improved energy efficiency and enhanced comfort through better heat distribution. For the first time, you'll have control over the heat in your apartment.

> Will property management control my heat?

You are in charge of your Cozy, and property management will be notified if there is a malfunction with your Cozy or radiator.

> Will I be able to adjust the valves of the radiator to control the heat like I have in the past?

With the Cozy in place, you will no longer need access to radiator valves. The Cozy ensures proper heat distribution without the need for additional measures.

> How much electricity does the Cozy use?

At \$0.30 per kilowatt hour, a Cozy costs \$2–3 per year to operate, which is equivalent to the energy usage of an LED lightbulb.

Cozy Interaction and Customization

> Can I get my covers in a different color? Can I paint them?

The Cozy comes in white, however, it can be painted. To do so, make sure to clean and prime the Cozy to avoid peeling. Please avoid painting over the sensors

> How do I clean it?

You can use a mild cleaning agent along with water to clean your Cozy.

> Can I place my plants on top of the cover?

Placing plants on top of the Cozy is safe since the Cozy is well insulated.
